CRYSTAL ARMOR

The Ultimate Renewal for Glass Surfaces

„CRYSTAL ARMOR“

HOME NANO TECH'S "CRYSTAL ARMOR" -RENEW AND PROTECT-

Where The package is specially designed to be applied on all glass surfaces in homes, offices, restaurants and commercial stores. CRYSTAL ARMOR is using a new and advanced protective formula for all types of glass and crystals. This formula is based on the latest and most advanced anti-scratch technology in the mobile phone industry, developed by NASA and is commonly used in the AUTOMOTIVE AND SUPERYACHT INDUSTRY.

Proven Advantages. Home NanoTech's inorganic coating was specifically designed for extreme semi-permanent durability and long-term resistance to abrasion, chemicals and all kinds of stains. The protective coating has successfully passed tests on MORE THAN 40,000 WASH CYCLES IN REAL TIME, has a remarkable UV filtering capability, is highly resistant to chemicals, offers a thermal protection and provides resistance to minor scratches. Our CRYSTAL ARMOR PACK is the ultimate generation of Nano protection for all types of glass surfaces.

How it works. Nano molecules bond with the glass structure and therefore create a protective layer that keeps the crystal surface from damage.

In a first step, a special polishing product and technique will erase minor scratches, chalk- and salt deposits and hard to remove stains from glass surfaces, which gives windows a COMPLETELY RENEWED APPEARANCE.

To maintain the renewed look, the then added special protection will result in a Super Hydrophobic effect that will prevent liquids and contaminants from adhering firmly to the treated surface, while improving VISION, even during heavy rains.

At the same time, the cleaning process of the material is extremely simplified and is getting less time consuming, as dirt is prevented to adhere to the surface. The THERMAL PROTECTION keeps your interior rooms from overheating by blocking UV-rays in summer and keep big windows from heat loss during winter.

Due to the extremely simplified cleaning process, costly hours of work for cleaning and spendings on replacements can be saved. Window's owners thus benefit from a long lasting renewed look and economic efficiency in the same time.

„CRYSTAL ARMOR“

Benefits

CHARACTERISTIC	EFFECTS
Renewed Look -> Crystal Clear View	Its invisibility factor allows a crystal clear view and a renewed look by adding transparency and smoothing the surface.
Liquid Repellent -> Anti Stain	Liquids are repelled from surfaces, therefore a permanent attachment of watermarks, salt- or chalk stains is being prevented- even on heavy rains
Anti Scratch	The surface becomes resistant to minor scratches and marks
Abbrasive and Chemicals Protection	Paints, graffiti and other contaminating agents can't get permanently attached to the surface, therefore they can be removed easily, avoiding permanent damage to the treated surface.
Extra Gloss	Due to its molecular characteristics, the NANO protection adds a layer of extra gloss to the treated surface enhancing the look.
Anti Corrosion	Corroding agents can't find their way to the glass surface, therefore damage by corrosion is avoided.
Anti UV	Ultra Violet Rays are being refiltered by the NANO coating, preventing premature ageing of the surface.
Thermal Protection	The molecular characteristics of the NANO protection significantly reduce the acquired temperature of the surface due to extensive exposure to sunlight. Interior rooms stay cooler.
Anti Ageing	The treated surface is sealed from the outside environment, avoiding direct contact to the environment, therefore, premature ageing is prevented.
Durability Warranty	Guaranteed to last at least 1 years when correctly maintained.

„CRYSTAL ARMOR“ Packages

BASIC

1 Year
Warranty

2,5 microns Nano
Coating thickness

Loyalty Program-
Discounts on other
packages
