FABRIC ARMOR

The Ultimate Renewal for Fabrics and Leather

HOME NANO TECH'S "FABRIC ARMOR" -RENEW AND PROTECT-

Where The package is specially designed to be applied on all kind of fabrics in homes, offices, restaurants and commercial stores. FABRIC ARMOR is using a new and advanced protective formula for all types of textiles and leathers. This formula is based on the latest and most advanced hydrophobic Nano-technology, developed by NASA, and is commonly used in the AUTOMOTIVE AND SUPERYACHT INDUSTRY.

Proven Advantages. Home NanoTech's inorganic coating was specifically designed for extreme semi-permanent durability and long-term resistance to abrasion, chemicals and all kinds of environmental degradation. The protective coating has successfully passed tests on MORE THAN 25,000 WASH CYCLES, has a remarkable UV filtering capability, is highly resistant to chemicals and sweat, protects the surface from stains and moisture and thereby prevents mould, based on its liquid repellant protection. Our FABIC ARMOR PACK is the ultimate generation of Nano protection for all types of textiles.

How it works. Nano molecules bond with the textile structure and therefore create a protective layer that keeps the fabric's surface from degradation.

In a first step, a special cleaning product and technique will erase discolouration and hard to remove stains from textile surfaces, which gives cushions, sun loungers, furniture and sunshades a COMPLETELY RENEWED APPEARENCE.

To maintain the renewed look, the then added special protection will result in a Super Hydrophobic effect that will prevent liquids and contaminants from adhering firmly to the treated surface in a long term, even when it's given a heavy use and hard conditions.

At the same time the cleaning process of the material is extremely simplified and is getting less time consuming, as dirt is prevented to adhere to the surface. The breathability of the textile surface is thereby not restrained. Treated surfaces become more hygienic and slightly antibacterial as bacteria cannot stick. The coating's moisture resistance will even PREVENT MOULD FORMATION.

The strong UV-PROTECTION keeps the fabrics from fading and colour loss by blocking harmful sunrays.

Due to the extremely simplified cleaning process, costly hours of work for cleaning and spendings on replacements can be saved. Textile's owners thus benefit from a long lasting renewed look and economic efficiency in the same time.

„FABRIC ARMOR“

Benefits

CHARACTERISTIC	EFFECTS
Renewed Look	The latest cleaning technique removes even heavy stains and thereby creates an enhanced appearance without changing the original colour.
Hydrophobic (=Liquid Repellent)	Liquids are repelled from surfaces, therefore a permanent attachment of environmental contaminants and stains is being prevented- even under heavy use.
Anti Mould	The surface becomes resistant to mould due to its super hydrophobic properties that keep moisture from penetrating the fabric's surface without influencing on the materials breathability.
Abbrasive and Chemicals Protection	Stains, bird droppings and other contaminating agents can't get permanently attached to the surface, therefore they can be removed easily, avoiding permanent damage to the treated surface.
Improved Hygiene	The treated surfaces repells sweat, dirt and more. A slight antibacterial effect is being created.
Anti UV	Ultra Violet Rays are being refiltered by the NANO coating, preventing premature ageing of the surface and fading of the textile's colour.
Invisibility factor	The fabric's coating is highly efficient but meanwhile odorless, invisible to the eye and not detectable by touch.
Anti Ageing	The treated surface is sealed from the outside environment. Avoiding direct contact to harmful impacts, a premature ageing is prevented.
Durability Warranty	Guaranteed to last at least 1 years when correctly maintained.

„FABRIC ARMOR“ Packages

BASIC

1 Year Warranty

2,5 microns Nano Coating thickness

Loyalty Program-Discounts on other packages

Maintenance Kit

5% Discount on Renewal

ABSOLUTE

2 Years Warranty

5 microns Nano Coating thickness

Loyalty Program-Discounts on other packages

Maintenance Kit

10% Discount on Renewal
70% Discount on Second Warranty-Year

SUPERIOR

5 Years Warranty

Up to 10 microns Nano Coating thickness

Loyalty Program-Discounts on other packages

Maintenance Kit

Discounts and Prices on demand

Professional Application Process in 15+ Steps
