

GREEN O₂

Air Purification Nano-Technology

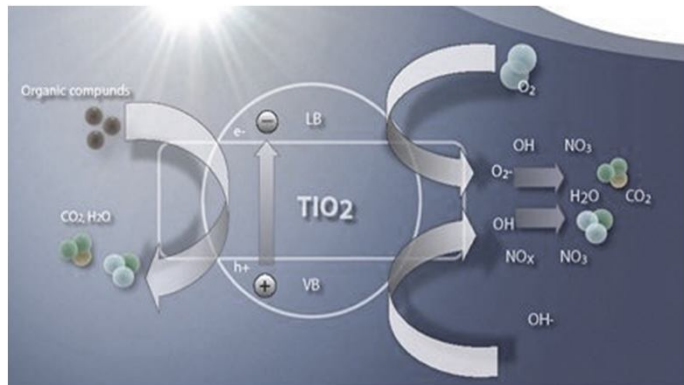

Improved Life Quality through Clean Air

GREEN O₂ is the latest innovation in air purification technology! The advanced air purification coating is based on NASA developed TiO₂ nano technology.

In the presence of light, titanium oxide **FORMS ACTIVE OXYGEN** on the treated surfaces and quickly destroys all micro-sized harmful air pollutants that previously existed or land on it after application. **GREEN O₂** does not simply destroy them but decomposes their microscopic remnants into harmless gas and water vapor. This includes neutralization of viruses, organic odors, cigarette smoke, evaporation from plastic and technology, smog, exhaust gases and air toxins!

Only a single application on glass surfaces, walls or wood elements keeps the room's air clean and purified for minimum 2 YEARS. The whole process of **GREEN O₂** photo catalytic decomposition is green in nature, non-toxic, ph-neutral, color- and odorless.

20 m² of coated surface filter out pollutants of 400.000 liters of air within only one hour. This corresponds to the filter **capacity of 2 large trees**.

Consequences of Polluted Air

- **SBS (Sick building-syndrome)** – Room air affects on health. Buildings with bad ventilation management pass viruses on inhabitants (e.g. flu epidemic).
- **Bad odors** are simply unpleasant, especially on boats with bad ventilation.
- **Short attention span-** Low oxygen level reduces physical and mental performance and leads to reduced productivity and fatigue
- **Breathing-** Increased problems with asthma and shortness of breath
- **Allergies-** Bacteria out of filters in air conditioning units or pollen can cause and aggravate allergies.
- **More health-related days of absence in schools and offices, less productivity, bad working performance and dissatisfaction lead to decreased efficiency.**

Benefits of GREEN O₂

- **Compatibility-** Can be applied on almost every surface and on Nano Coatings
- **Destroys air pollutants-** Nano Titanium-Oxide technology decomposes pollutants and viruses into harmless gas and water vapor. Diseases are not being passed from one person to the other anymore.
- **Increased productivity-** more oxygen is being produced. Higher oxygen level enhances concentration, creativity and productivity.
- **No odors-** odor particles are being decomposed completely by Green O₂, the most advanced odourless air purification technology.
- **Allergies and toxins-** Green O₂ does not only destroy viruses, but also allergy-causing micro-sized pollutants and toxins from plastic evaporation which land on the titanium oxide treated surface.
- **Durability Warranty-** Marine NanoTech guarantees at least two years full effectiveness, which means two years of increased productivity, clean air and satisfaction.
